

UNLOCKING
CONSCIOUSNESS

BRIAN MIND FORUM

Appendix 008 Computer Software v Brain Software.

Computers and their Software

Digital, Binary, Sequential

Processes artificial, machine information

Rule based: Ultimately predictable

Driven by a Processor executing an inserted
rule based program

Computers execute algorithms
and exhibit artificial intelligence

Programmers devise new algorithms
and programs

Computers can 'play' chess, because there
is a fixed field of play, clearly defined rules
and an easily identified winner

The Brain

Analogue, Parallel

Processes biological
information

Probabilistic, Unpredictable
Emotional

Driven by information.
The whole body is the
processor

Brains execute inherited
or learned responses and
exhibit human intelligence

Brains can think, invent
imagine, prepare and grow
new neural solutions

Real World Problems
vaguely defined problem
balance of probabilities
contingent solutions.
